(+1) 763-238-6552 | humberto.raniolo@gmail.com | linkedin.com/in/humberto-raniolo-sa4/ | github.com/wololo-aeyoyo

OBJECTIVE

Building stable, scalable cloud and on-premise solutions that improve performance and maintainability.

EXPERIENCE

Technical Support Specialist

August 2025 – July 2026

Boston Scientific

Arden Hills, MN

- Perform advanced hardware/software troubleshooting, from root cause analysis to stakeholder coordination.
- Delivered high-quality support in a fast-paced environment, balancing multiple cases and priorities.
- Documented troubleshooting steps, configurations, and resolutions to support team knowledge sharing.
- Bilingual (English/Spanish), providing clear communication and support across diverse teams and users.

Reliability Engineer – Observability

September 2023 – March 2025

BestBuy

Richfield, MN

- Improved and maintained observability tools like Splunk, Elastic, Grafana, VictoriaMetrics, and Graphite.
- Contributed to the successful migration of the Splunk Enterprise cluster to the Splunk Cloud solution, this yielded in millions of dollars in yearly cost savings in licensing fees and server cost.
- Built automation for Splunk Cloud index creation, freeing app teams from the 2-week release cycle.
- Frequently worked with Terraform, Chef, and Ansible to provision and configure AWS infrastructure.
- Leverage and deployed open-source tooling for network monitoring.

Software Developer – Web Development

February 2023 - May 2023

Accentio Studios

Remote

- Built challenge management for the 500 historias app with NodeJS/NestJS microservices and RabbitMQ.
- Utilized Docker to containerize services, ensuring isolation, scalability, and efficient deployment.

Software Engineer – Web Development

2021 – 2023

Credicard Consortium

Remote

- Built REST APIs with Node.js (NestJS), Spring Boot, and SQL, connecting to legacy IBM-DB2 systems.
- Built OpenLDAP-based authentication services that scaled to thousands of concurrent users.
- Set up CI/CD pipelines for Android apps with Flutter, saving 4 hours of manual work per release.
- Designed a scalable prepaid card payment system using Angular, Node.js, and Spring Boot.

Software Developer – Intern

2019-2020

Telefónica

Caracas, Venezuela

- Optimized Call Detail records systems in C#, Java, Struts 2, and SQL Server, cutting CDR processing time by 50%.

PROJECTS

Kubernetes Homelab | FluxCD — yaml

April 2025 - Ongoing

- Designed and maintains a self-hosted bare-metal Kubernetes cluster managed via GitOps. Hosts AI workloads, and a observability stack (Grafana, Loki, Mimir, Tempo, Pyroscope). Implements secrets with SOPS and Vault.

EDUCATION

UNEXPO - Luis caballero Mejias University

Caracas, Venezuela

Bachelor of Science Systems Engineering

August 2020

TECHNICAL SKILLS

Languages: Node.js, Ruby, Python, Java, C#, JavaScript, HTML, CSS, SQL.

Frameworks: Angular, NestJS, SpringBoot.

Technologies: AWS, Terraform, Chef, Ansible.

Certifications: Splunk Cloud Administration, Splunk Cluster Administration , and Using the Splunk REST API.
